On page 19, Exercise 3.2 Add: w is eulerian.

On page 29, the proof of Lemma 3.4.1-(3) Note that Lemma 3.4.1 is for all graphs, nit just cubic graphs. However, the proof the part (3) (on page 29 and 30) is presented for cubic graphs. Some correction are needed for this part, which does not need any big change in technique. For example, some “circuits” should be should be “even subgraph”, and the “3-edge-coloring” should be “parity subgraph decomposition” (see Definition 8.2.3).

On page 47, Lemma 5.1.4. Add: $\delta(H) \geq 1$.

On page 47, Lemma 5.1.4. Condition (2) should be

“(2) for each $\mu \in \{1, 2, 3\}$, the suppressed cubic graph $\overline{G[E(C_\mu) \cup M_\mu]}$ is 3-edge-colorable if $M_\mu \neq \emptyset$,”
...

On page 86, lines 3 and 4. e_1 should be e_2
