

Table of Contents

Chapter 0	Notations and Prerequisites	1
Chapter 1	Axioms and Examples	6
1.1	Independent sets	6
1.2	Circuits	12
1.3	Bases	16
1.4	Rank	19
1.5	Closure and closed sets	24
1.6	Other axioms	29
1.7	Examples of representable matroids	32
1.8	Geometric representation of small rank matroids	41
Chapter 2	Matroid Duals and Minors	51
2.1	Matroid duality	51
2.2	Dual of representable matroids	57
2.3	Graphic matroids	61
2.4	Minors	68
2.5	Serial and parallel connections	75
2.6	Packing matroids	83
2.7	Transversal matroids	86
Chapter 3	Connectivity	89
3.1	Connected matroids	89
3.2	Tutte connectivity	94
3.3	Matroid connectivities of a graph	101
3.4	Other matroid connectivities	112
3.5	Separations of representable matroids	116
3.6	Elementary properties of 2- and 3-connected matroids	120

Chapter 4	Representable Matroids	132
4.1	Representation over a field	132
4.2	Constructing representation for matroids	138
4.3	Equivalent representation	149
4.4	Characterizations of representability	155
4.5	Algebraic matroids	162
Chapter 5	Lattices and Modularity in Matroids	171
5.1	Posets and lattices	171
5.2	The closed set lattice of a matroid	178
5.3	The closed set lattices of minors	181
5.4	The closed set lattices of projective and affine matroids	187
5.5	Modularity	187
5.6	Matroid extension	192
5.7	Generalization of graphical operations in matroids	200
Chapter 6	Binary and Ternary Matroids	212
6.1	Characterization of a binary matroid	212
6.2	Orthogonality	219
6.3	Characterization of a ternary matroid	226
6.4	Decomposition of a 3-connected binary matroid	233
6.5	Chords of circuits	238
6.6	Chain groups	240
Chapter 7	Splitter Theorem and its Applications	245
7.1	Splitter Theorem	245
7.2	Some applications	255
7.3	Decomposition of regular matroids	264
7.4	Excluded minor characterizations of graphic and regular matroids	267
7.5	Orientable matroids	283

Chapter 8	Submodular Functions and Matroid Unions	287
8.1	Rado-Hall Theorem	287
8.2	Submodular functions	290
8.3	Matroid induced by a bipartite graph	295
8.4	Matroid unions	302
8.5	Uniformly dense matroids	306
Chapter 9	Optimization	314
9.1	Greedy algorithm	314
9.2	Maximum common independent set problem	319
9.3	Matroid partitions	322
9.4	Matroid with max-flow-min-cut property	324
9.5	Multicommodity flows in matroids	187
Chapter 10	Matroid Coloring and Related Problems	339
10.1	Matroid colorings	171
10.2	Nowhere zero flows in matroids	350
10.3	Blocks and tangential blocks	357
10.4	Cycle cover of matroids	360
Chapter 11	Extremal Matroid Theory	375
11.1	Generalization of extremal graph theory problems	375
11.2	Forbidding submatroids	377
11.3	Forbidding minors	379
11.4	The growth rate problem	383
Chapter 12	Some Problems in Matroid Theory	387
12.1	Matroid representability	387
12.2	Excluded minor characterizations	389
12.3	Generalization of Whitney's 2-isomorphism theorem	390
12.4	Matroid reconstruction	391

12.5	Matroid union	392
12.6	Matroid coloring	393
12.7	Unimodal conjecture	395
12.8	Enumeration	393
12.9	Other problems	395
Appendix Hints and Sketched Proofs of Selected Exercises		400
Bibliography		504
Symbol Index		533
