**INSTRUCTIONS**

- Besides this cover page, there are 12 pages of questions and problems on this exam. **MAKE SURE YOU HAVE ALL THE PAGES.** If a page is missing, you will receive a grade of zero for that page. Read through the entire exam. If you cannot read anything, raise your hand and I will come to you.
- Place your I.D. on your desk during the exam. Your I.D., this exam, and a straight edge are all that you may have on your desk during the exam. **NO CALCULATORS! NO SCRATCH PAPER!** Use the back of the exam sheets if necessary. You may remove the staple if you wish. Print your name on all sheets.
- Pages 1-12 are multiple choice. Expect no part credit on these pages. There are no free response pages. However, to insure credit, you should explain your solutions fully and carefully. Your entire solution may be graded, not just your final answer. **SHOW YOUR WORK!** Every thought you have should be expressed in your best mathematics on this paper. Partial credit will be given as deemed appropriate. **Proofread your solutions and check your computations** as time allows. **GOOD LUCK!!**

REQUEST FOR REGRADE	
Please regard the following problems for the reasons I have indicated: (e.g., I do not understand what I did wrong on page ____.)	
(Regrades should be requested within a week of the date the exam is returned. Attach additional sheets as necessary to explain your reasons.)	
I swear and/or affirm that upon the return of this exam I have <b>written nothing on this exam</b> except on this REGRADE FORM. (Writing or changing anything is considered to be cheating.)

For each question write your answer in the blank provided. Next find your answer from the list of possible answers listed below and write the corresponding letter or letters for your answer in the blank provided. Then circle this letter or letters. Finally, circle your answer from the list below. Using Euler's Method with  $h = 0.1$ , you are to find the first two iterates (i.e.  $y_1$  and  $y_2$ ) to obtain a numerical approximation of the solution of the Initial Value Problem (IVP) for  $x = 1.2$ ; that is, if  $y = \varphi(x)$  is the solution to the IVP, you are to find an approximation for  $\varphi(1.2)$ . We use the standard notation used in class (attendance is mandatory).

IVP ODE  $y' = x+y$  IC  $y(1) = 1$

Work the problem using a table as discussed in class.

**DEFINITION.** An operator  $T:V \rightarrow W$  where  $V$  and  $W$  are vector spaces over the same field  $\mathbf{K}$  is

linear if for all  $\alpha, \beta \in \mathbf{K}$  and  $\vec{v}_1, \vec{v}_2 \in V$ , we have \_\_\_\_\_ 57. (2 pts.) A B C D E

**THEOREM.** The operator  $L:A(\mathbf{R},\mathbf{R}) \rightarrow A(\mathbf{R},\mathbf{R})$  defined by  $L[y] = y'' + 2y' + 6y$  is a linear operator.

Proof. By the above definition, to show that the operator  $L$  is a linear operator, we must show that if  $c_1$  and  $c_2$  are constants in  $\mathbf{R}$  and  $\phi_1(x)$  and  $\phi_2(x)$  are functions in  $A(\mathbf{R},\mathbf{R})$ , then

\_\_\_\_\_ 58.(2 pts.) A B C D E. Since this is an identity, we can use the standard format for proving identities.

Since we have shown the appropriate identity, we have shown that  $L$  is a linear operator.
