

CONTENTS

Part 1: Real Numbers, Continuity and Limits

I.	The Real Numbers	1
	1. The Axioms	1
	2. Some Notation, Intervals	3
	3. Algebra and Arithmetic	3
	4. The Natural Numbers	6
	5. Proof That Nonnegative Numbers Have n^{th} Roots	9
	6. The Betweenness Property for the Rational Numbers	16
	7. Absolute Value	17
	8. Concluding Comments	18
II.	The Notion of Arbitrary Closeness	19
	1. Introduction to Arbitrary Closeness	19
	2. The Set of Points Arbitrarily Close to a Set	20
	3. The Definition of Continuity	22
	4. Limit Points and Isolated Points	24
III.	The Notion of Limit	26
	1. The Definition of Limit	26
	2. Limits in Terms of Arbitrary Closeness	28
	3. The Limit Characterization of Continuity	29
	4. Limits in Terms of Continuity	30
	5. One-sided Limits	31
IV.	Limit Theorems	33
	1. Limits for Sums and Differences	33
	2. Limits for Products	35
	3. Continuity of Polynomials	37
	4. Limits for Quotients	38
	5. Continuity of Rational Functions	39
	6. Compositions of Functions and Limits	40
	7. The Squeeze Theorem	42
	8. Limits of Sequences	43
V.	Two Properties of Continuous Functions	45
	1. The Intermediate Value Theorem	45
	2. The Maximum - Minimum Theorem	48

Part 2: Differentiation

VI.	Introduction to the Derivative	52
	1. Definition of the Derivative	52
	2. Differentiability and Continuity	56
	3. Linear Approximation	59
VII.	Derivatives of Combinations	61
	1. Sums, Differences, Products and Quotients	61
	2. Differentiating Polynomials and Rational Functions	64
	3. The Chain Rule	65
VIII.	The Inverse Function Theorem	68
	1. One- to-one Functions and Inverses	68
	2. Continuity of the Inverse Function	68
	3. The Inverse Function Theorem	72
	4. Differentiating Rational Powers	73
	5. Differentiating Trigonometric Functions and Their Inverses	75
IX.	Maxima, Minima and Derivatives	80
	1. Neighborhoods	80
	2. Local and Global Maxima and Minima	81
	3. Critical Points	84
X.	The Mean Value Theorem and Consequences	86
	1. The Mean Value Theorem	86
	2. Functions with Equal Derivatives	88
	3. Derivative Test for Local Extrema	89
	4. Concavity	94
	5. Intermediate Value Property for Derivatives	101

Part 3: Integration

XI.	Area	105
XII.	The Integral	111
	1. Partitions	111
	2. Upper and Lower Sums	112
	3. Definition of the Integral	116
	4. Two Theorems about Integrability	116
	5. Continuous Functions Are Integrable	120

XIII.	The Algebra of the Integral	123
	1. Integrability of Sums	123
	2. Integrability of Scalar Products	125
	3. Integrability of Absolute Values	128
	4. Integrability of Products	130
	5. Integrability of Quotients	133
	6. Integrability Over Subintervals	135
XIV.	The Fundamental Theorem of Calculus	138
	1. The Fundamental Theorem	138
	2. Area Again	142
XV.	Characterizations of Integrability	146
	1. Background	147
	Countable sets	147
	Series	148
	Open Sets and Closed Sets	149
	Covers	150
	2. Oscillation	151
	3. Content Zero and Measure Zero	152
	4. Characterizations of Integrability	153
XVI.	The Natural Logarithm and Exponential Functions	159
	1. Preliminary: Reversing the Limits of Integration	159
	2. Algebraic Properties of $\int_1^x \frac{1}{t}$	161
	3. The Graph of $\ln(x) = \int_1^x \frac{1}{t}$	164
	4. The Inverse of $\ln(x) = \int_1^x \frac{1}{t}$	165
	5. Integrating the Natural Logarithm Function	169
	6. What Have We Accomplished?	170
XVII.	General Logarithm and Exponential Functions	172
	1. Definitions of Logarithm and Exponential Functions	172
	2. The Algebraic Relation between Logarithm Functions and \ln	173
	3. Properties of Logarithm Functions	174
	4. Properties of Exponential Functions	176
	5. Logarithm and Exponential Types of Functions	178
	Additive Functions	179
	<i>L</i> - Functions	181
	<i>E</i> - Functions	182

Part 4: Sequences and Series

XVIII.	L'Hôpital's Rules	184
	1. Definitions for Limits Involving Infinity	185
	Two Limit Theorems As x Approaches $\pm\infty$	187
	2. L'Hôpital's Rule for $\frac{\infty}{\infty}$	188
	The Indeterminate Forms 0^0 , ∞^0 and 1^∞	191
	3. L'Hôpital's Rule for $\frac{0}{0}$	192
XIX.	Numerical Sequences	196
	1. The Algebra of Sequences	196
	2. Bounded Monotonic Sequences	199
	3. Inductively Defined Sequences	201
	The Graphical Method	203
	4. Arbitrary Closeness and Continuity via Sequences	205
XX.	Subsequences and Cauchy Sequences	208
	1. Subsequences	208
	2. The Bolzano - Weierstrass Theorem	209
	3. Cauchy Sequences	210
	4. Cauchy Sequences and the Completeness Axiom	213
XXI.	Numerical Series	217
	1. General Elementary Results	217
	2. i^{th} Term Tests	219
	3. Comparison Tests	221
	4. The Integral Test	223
	5. e as the Sum of a Series	228
XXII.	Absolute Convergence	232
	1. The Notion of Absolute Convergence	232
	2. The Ratio Test	233
	Upper and Lower Limits	234
	The Ratio Test	234
	3. The Root Test	237
	4. Relationship between the Ratio Test and the Root Test	239
	5. Rearrangements of Series	241
	Rearrangements of Absolutely Convergent Series	242
	Rearrangements of Conditionally Convergent Series	243
	Main Theorem	246
	6. Cauchy Products	248

XXIII.	Sequences of Functions	251
	1. Pointwise Convergence	251
	2. Uniform Convergence	255
	3. Uniform Convergence and Continuity	258
	4. Uniform Convergence and Differentiability	261
	5. Uniform Convergence and Integrability	263
XXIV.	Power Series	266
	1. General Results for Series of Functions	266
	2. The Interval of Convergence of Power series	268
	Examples of Intervals of Convergence	271
	3. Uniform Convergence of Power Series	273
	Abel's Theorem	275
	4. Calculus of Power Series	277
	Differentiating Power Series	277
	Integrating Power Series	280
XXV.	Taylor Series	282
	1. Infinitely Differentiable Functions Not Represented by Taylor Series	283
	2. Taylor Polynomials and the Remainder Term	286
	3. The Lagrange Form of the Remainder	287
	4. The Integral Form of the Remainder	290
	5. Analytic Functions	292
	Final Comments	298
