MATH 251.007 NAME (print): ____________________

Instr. K. Ciesielski

Fall 2010

SAMPLE FINAL TEST

Solve the following exercises. **Show your work.**

Ex. 1. Find the determinant of the matrix. Each time you expand the the matrix, you must expand it over a row or column that has the largest number of zeros. If necessary, use the row (or column) reduction method to create additional zeros.

$$\begin{bmatrix} 1 & 2 & -11 & 1 \\ 0 & 0 & 2 & 0 \\ 7 & 1 & 0 & 2 \\ -2 & 0 & 9 & 0 \end{bmatrix}$$

Ex. 2. Find the inverse matrix of

$$\begin{bmatrix} 1 & 0 & 2 \\ 3 & 1 & 0 \\ 1 & 1 & 1 \end{bmatrix}$$

Ex. 3. Let $\mathbf{a} = \langle 0, 1, 2\rangle$, $\mathbf{b} = \langle -1, 0, 7\rangle$, and $\mathbf{c} = \langle 2, 3, -1\rangle$. Evaluate $(\mathbf{a}\cdot\mathbf{b})\cdot(\mathbf{b}\times\mathbf{c})$.

Ex. 4. Find the parametric equations of the line that passes through the point $P(11, 13, -7)$ and is perpendicular to the plane with the equation: $x - 2z = 17$.

Ex. 5. Let $\mathbf{v}(t) = \mathbf{i}(t+1)^{-1} + \mathbf{k}t^3$ be a velocity of a particle. Find the acceleration vector $\mathbf{a}(t)$ of the particle and its position vector $\mathbf{r}(t)$, where its initial position was $\mathbf{r}_0 = 3\mathbf{i}$.

Ex. 6. Describe and sketch the graph of the equation: $4z^2 = x^2 + y^2$.

Ex. 7. Compute the first order partial derivatives of $h(x, y, z) = e^{2x+3z}\sin x \tan y$.

Ex. 8. Compute the second order partial derivatives of $g(u, v) = \ln(u + 2v) - \sin u \cos v$.

Ex. 9. Find an equation of the plane tangent to the surface $z = \ln x - \sin y$ at the point $P(1, \pi/2, -1)$.

Ex. 10. Find the absolute maximum and the absolute minimum of the function $f(x, y) = 4x^2 + 2xy + y^2$ on the region bounded below by the parabola $y = x^2$ and above by the line $y = 9$.

Ex. 11. Evaluate the integrals:

(a) $\displaystyle\int_{-1}^{2}\int_{-y}^{0}(x+2y^2)\,dx\,dy =$

(b) $\displaystyle\int_{0}^{1}\int_{0}^{\pi}\frac{1}{x+1}+\sin y\,dy\,dx =$

(c) $\displaystyle\int\!\!\int_R \frac{dy\,dx}{\sqrt{9-x^2-y^2}}$, where R is the second quadrant region bounded by $x^2+y^2=4$.

Ex. 12. Find the mass of the solid bounded by the hemisphere $x^2+y^2+z^2 \le R^2$, $z \ge 0$, with the density $\delta(x,y,z) = x^2+y^2+z^2$.

Ex. 13. Find the mass of the plane lamina bounded by $x=0$ and $x=9-y^2$ with density $\delta(x,y)=x^2$.

Ex. 14. Set up the integral formulas, **including the limits of the integrations,** for the following problems. *Do not evaluate the integrals!*

(a) The mass of the solid T with the density $\delta(x,y,z)=x^2+e^z$ bounded by the surfaces: $6x+2y+z=12$, $x=0$, $y=0$, and $z=0$.

(b) The volume of the solid bounded by $z=x^2+y^2$, $z=0$, $x=0$, $y=0$, and $x+y=1$.

Ex. 15. Evaluate the integral, where C is the graph of $y=x^3$ from $(-1,-1)$ to $(1,1)$.

$\displaystyle\int_C y^2\,dx + x dy =$

Ex. 16. Evaluate the integral

$\displaystyle\int_{(\pi/2,\pi/2)}^{(\pi,\pi)}(\sin y + y\cos x)\,dx + (\sin x + x\cos y)\,dy =$

Ex. 17. **Apply Green's theorem** to evaluate the following integral, where the simple closed curve C is the boundary of the circle $x^2+y^2=1$.

$\displaystyle\oint_C(\sin x - x^2y)\,dx + xy^2\,dy =$
