MATH 251 Instr. K. Ciesielski Fall 2013

## SAMPLE FINAL TEST

(longer than the actual Final Test)

Solve the following exercises. Show your work.

**Ex. 1.** ST #1 Ex 3: Find the determinant of the matrix. Each time you expand the the matrix, you must expand it over a row or column that has the largest number of zeros. If necessary, use the row (or column) reduction method to create additional zeros.

 $A = \begin{bmatrix} -1 & 2 & 0 & 0\\ 1 & -1 & 1 & -1\\ 1 & 2 & 0 & 1\\ 0 & 3 & 1 & 2 \end{bmatrix}$ 

Ex. 2. ST #1 Ex 4: Find the inverse matrix of

$$A = \left[ \begin{array}{rrr} 1 & 0 & 1 \\ -1 & 1 & 2 \\ 0 & 1 & -1 \end{array} \right]$$

**Ex. 3.** ST #1 Ex 6: Let  $\mathbf{a} = \langle 0, 1, 2 \rangle$ ,  $\mathbf{b} = \langle -1, 0, 7 \rangle$ , and  $\mathbf{c} = \langle 2, 3, -1 \rangle$ . Evaluate:  $2\mathbf{a} - \mathbf{b} + \mathbf{c}$ ,  $|\mathbf{c}|$ , and  $(\mathbf{a} \cdot \mathbf{b})$  ( $\mathbf{b} \times \mathbf{c}$ ). (Do not confuse vectors with numbers. No partial credit for solutions with such errors.)

**Ex. 4.** ST #2 Ex 1: Find a vector equation of the line that passes through the point P(11, 13, -7) and is perpendicular to the plane with the equation: x - 2z = 17.

**Ex. 5.** ST #2 Ex 7: Let  $\mathbf{v}(t) = \mathbf{i}(t+e)^{-1} + \mathbf{k} t^3$  be a velocity of a particle. Find the acceleration vector  $\mathbf{a}(t)$  of the particle and its position vector  $\mathbf{r}(t)$ , where its initial position was  $\mathbf{r}(0) = 3\mathbf{i}$ .

**Ex. 6.** ST #2 Ex 5(b): Describe and sketch the graph of the equation:  $4y = x^2 + z^2$ .

**Ex. 7.** ST #3 Ex. 2: Compute the first order partial derivatives of  $f(x, y, z) = ze^{x^2} \cos y$ .

**Ex. 8.** ST #3 Ex. 3: Compute all second order partial derivatives of  $g(s,t) = e^{5t} + t \sin(3s)$ .

**Ex. 9.** ST #3 Ex. 4: Find an equation of the plane tangent to the surface  $z = x^2 - 5y^3$  at the point P(2, 1, -1).

**Ex. 10.** ST #3 Ex. 5: Find the absolute maximum and the absolute minimum of the function  $f(x, y) = x^3 - xy$  on the region bounded below by parabola  $y = x^2 - 1$  and above by line y = 3. You will get credit only if all critical points are found.

Ex. 11. ST #4 Ex. 1(a)&(c): Set up the integral formulas, including the limits of the integrations, for the following problems. *Do not evaluate the integrals!* 

- (a) The volume of the solid bounded by  $z = x^2 + y^2$ , z = 0, x = 0, y = 0, and x + y = 1.
- (c) The mass of the solid T with the density  $\delta(x, y, z) = x^2 + e^z$  bounded by the surfaces: 6x + 2y + z = 12, x = 0, y = 0, and z = 0.

Ex. 12. ST #4 Ex. 2: Evaluate the integrals:

(a)  $\int_0^1 \int_0^\pi \frac{1}{x+1} + \sin y \, dy \, dx =$ 

(b) 
$$\int_{-2}^{0} \int_{0}^{y} (x+2y^2) dx dy =$$

(c)  $\int \int_R \frac{dy \, dx}{\sqrt{9 - x^2 - y^2}}$ , where *R* is the *second quadrant* region bounded by  $x^2 + y^2 = 4$ .

**Ex. 13.** ST #4 Ex. 3: Find the mass of the solid bounded by the hemisphere  $x^2 + y^2 + z^2 \le R^2$ ,  $z \ge 0$ , with the density  $\delta(x, y, z) = x^2 + y^2 + z^2$ .

**Ex. 14. ST #4 Ex. 4:** Find the mass of the plane lamina bounded by x = 0 and  $x = 9 - y^2$  with density  $\delta(x, y) = x^2$ .

**Ex. 15.** ST #4 Ex. 6: Evaluate the integral, where C is the graph of  $y = x^3$  from (-1, -1) to (1, 1)

 $\int_C y^2 \, dx + x \, dy =$ 

**Ex. 16.** ST #4 Ex. 8: Find a potential function of the vector field and use the fundamental theorem for line integrals to evaluate

$$\int_{(\pi/2,\pi/2)}^{(\pi,\pi)} (\sin y + y \cos x) \, dx + (\sin x + x \cos y) \, dy =$$

Ex. 17. ST #4 Ex. 9: Apply Green's theorem to evaluate the following integral, where the simple closed curve C, with counter clockwise direction, is the boundary of the circle  $x^2 + y^2 = 1$ .

$$\oint_C (\sin x - x^2 y) \, dx + x y^2 \, dy =$$
