NAME (print): _____

MATH 251.010 Instr. K. Ciesielski Fall 2013

SAMPLE TEST # 1

Solve the following exercises. Show your work. (No credit will be given for an answer with no supporting work shown.)

Ex. 1. Evaluate

(a)
$$3\begin{pmatrix} 2 & 3\\ 4 & 5\\ 11 & -1 \end{pmatrix} - 5\begin{pmatrix} 0 & 8\\ 4 & -2\\ 5 & 1 \end{pmatrix} =$$

(b) $\begin{pmatrix} 1 & 2 & 1\\ -1 & 6 & 3\\ 0 & 1 & 2 \end{pmatrix} \begin{pmatrix} 1 & 1\\ 0 & -1\\ 2 & 3 \end{pmatrix} =$
(c) $(1 -2 & 3)\begin{pmatrix} 1\\ 7\\ -1 \end{pmatrix} =$

(d)
$$\begin{pmatrix} 1\\ 7\\ -1 \end{pmatrix} \begin{pmatrix} 1 & -2 & 3 \end{pmatrix} =$$

Ex. 2. Solve each of the following systems of linear equations by representing as augmented matrix and transforming it to the row reduced echelon form. If the system inconsistent, give a reason for it explain the meaning of this fact in terms of solutions. If it is consistent, express

its solution in the vertical vector form as $\begin{pmatrix} a \\ b \\ c \end{pmatrix} = \begin{pmatrix} 2 \\ 3 \\ -1 \end{pmatrix}$ or $\begin{pmatrix} a \\ b \\ c \end{pmatrix} = \begin{pmatrix} 2 \\ 3 \\ -1 \end{pmatrix} + y \begin{pmatrix} 0 \\ 5 \\ 11 \end{pmatrix}$.

(a)
$$\begin{cases} a + b - c = 0\\ a - 4b + 2c = -1\\ 2a - 3b + c = 1 \end{cases}$$

(b)
$$\begin{cases} a + b - c = 0\\ a - 4b + 2c = 1\\ 2a - 3b + c = 1 \end{cases}$$

(c)
$$\begin{cases} a + b - c = 0\\ a + 2c = 1\\ 2a - 3b + c = 1 \end{cases}$$

Ex. 3. Find the determinant of the matrix. Each time you expand the the matrix, you **must** expand it over a row or column that has the largest number of zeros. If necessary, use the row (or column) reduction method to create additional zeros.

(-1	2	0	0	
	1	-1	1	-1	
	1	2	0	1	
(0	3	1	2 /	

Ex. 4. Find the inverse matrix of

(1	0	$1 \rangle$
	-1	1	2
	0	1	-1 /

Ex. 5. Let A be as below. Show that it is its own inverse, that is, that $A^{-1} = A$.

$$A = \begin{pmatrix} 1/2 & \sqrt{3}/2 & 0\\ \sqrt{3}/2 & -1/2 & 0\\ 0 & 0 & -1 \end{pmatrix}$$

Ex. 6. Let $\mathbf{a} = \langle 0, 1, 2 \rangle$, $\mathbf{b} = \langle -1, 0, 7 \rangle$, and $\mathbf{c} = \langle 2, 3, -1 \rangle$. Evaluate: $2\mathbf{a} - \mathbf{b} + \mathbf{c}$, $|\mathbf{c}|$, and $(\mathbf{a} \cdot \mathbf{b})$ ($\mathbf{b} \times \mathbf{c}$). (Do not confuse vectors with numbers. No partial credit for solutions with such errors.)
