Directions: You may work to solve these problems in groups, but all written work must be your own. Unless the problem indicates otherwise, all problems require some justification; a correct answer without supporting reasoning is not sufficient. Submissions must be stapled. See "Guidelines and advice" on the course webpage for more information.

1. Suppose $B \neq \varnothing$ and $A \times B \subseteq B \times C$. Prove that $A \subseteq C$.
2. Each of the following is true or false. Decide which is the case and prove or disprove accordingly, using any method.
(a) For every natural number $n$, the integer $n^{2}+17 n+17$ is prime.
(b) If $a, b, c \in \mathbb{N}$ and $a b, b c$, and $a c$ all have the same parity, then $a, b$, and $c$ all have the same parity.
(c) If $A$ and $B$ are finite sets, then $|A \cup B|=|A|+|B|$.
(d) If $A$ and $B$ are sets, then $\mathcal{P}(A) \cap \mathcal{P}(B)=\mathcal{P}(A \cap B)$.
(e) If $A$ and $B$ are sets, then $\mathcal{P}(A) \cup \mathcal{P}(B)=\mathcal{P}(A \cup B)$.
(f) If $p$ and $q$ are prime numbers for which $p<q$, then $2 p+q^{2}$ is odd.
3. Prove the following using induction or a "no smallest counterexample" argument.
(a) For each $n \in \mathbb{N}$, we have $\sum_{k=1}^{n} k^{2}=\frac{n(n+1)(2 n+1)}{6}$.
(b) For each $n \in \mathbb{N}$, we have $\sum_{k=1}^{n} \frac{k}{(k+1)!}=1-\frac{1}{(n+1)!}$.
4. Suppose that $\alpha \in \mathbb{R}$ and $0<\alpha<1$. A magical cake has icing on one side. A baker cuts the cake to make a slice with center angle $\alpha \cdot 2 \pi$ (radians), flips the slice over (so the piece has icing face-down), and the slice magically reattaches to the rest of the cake. The baker continues to make wedge slices with center angle $\alpha \cdot 2 \pi$, proceeding counter-clockwise around the cake with each subsequent slice starting where the previous slice ended. For which $\alpha \in \mathbb{R}$ will this process eventually lead to the cake again having all its icing on the same side (up or down)? For which $\alpha \in \mathbb{R}$ will this process lead to the cake having all its icing facing down?
